ABOUT US

Since joining the American Ultraviolet family in 2005, Aetek UV Systems has continued to produce and support the UltraPak and UVXL equipment lines that our customers rely on, as well as becoming the custom systems integration division of American Ultraviolet. This versatility allows the Aetek division the ability to support legacy systems our customers depend on while simultaneously helping those customers look ahead to their future needs. Sometimes this involves making upgrades and changes to dependable UV systems that have been in operation for decades, while other times it means employing newer technology, such as UV LED systems.

As the company has grown and evolved, some things remain constant. American Ultraviolet and the Aetek UV Systems division are headquartered in the heartland of America. We proudly design, fabricate, assemble, and test our UV systems in our 70,000 square foot Lebanon, Indiana facility. Our engineering and production teams have unmatched experience and expertise in not only the production of reliable UV curing systems, but also the repair and refurbishment of the UV curing systems they have produced over the last several decades.

ULTRAPAK

If you've been around the world of label and narrow web printing for any amount of time, you've no doubt seen these systems in action. With the tight optics required to cure at high press speeds and easily accessible and swappable inner lamp modules, UltraPak UV curing systems - coupled with a solid preventative maintenance program - continue to provide customers with the ability to operate at high

speeds, around the clock, without having to worry about the UV curing modules going down unexpectedly and shutting down a production line.

REFURBISHMENT

We realize that our best customers are the ones we already have. Our customers have already paid us the ultimate compliment by purchasing Aetek UV Systems equipment. Aetek wants our customers to be able to rely on our equipment for decades to come, which is why we offer a robust refurbishment program for our UV modules that enable our customers to continue operating at full capacity while we return their UV lamp modules to like-new condition.

Aetek also offers full refurbishment and repair of complete UV systems, so if you inherited an Aetek system with your business that has seen years of neglect and is in desperate need of maintenance and repair, we're happy to bring the whole system in to our production facility and get it up and running for you.

UPGRADES & NEW SYSTEMS

As the world continues to work toward reducing mercury use, American Ultraviolet has been hard at work integrating UV LED technology into new and retrofit options for new and existing customers who are focused on improving the future as much as preserving the past.

Since we know nobody knows your process better than you do, our team will work directly with you to determine which options work best for your specific operation and equipment. As the decades add up, we've seen that the more we listen to our customers, the better the results are for all of us. We strive to leverage our combined experience to achieve the best possible outcomes for our customers.

Insightful Solutions. Remarkable Results. Since 1960.
