For Immediate Release

Exclusive North America Distribution Agreement for UVC Dosimeters

October 9, 2019 (Lebanon, Indiana) - American Ultraviolet and Intellego Technologies AB (Stockholm, Sweden) have signed an exclusive distribution agreement in North America for the UVC Dosimeter.™ The dosimeter allows Infection Control and Environment Service teams at public and private hospitals, VAs and ASCs, to validate and document that all ultraviolet devices they use are delivering energy levels that can be correlated lethal to MRSA, *C. diff* and other pathogens of concern.

Unlike other dosimeters, the UVC Dosimeter from American Ultraviolet is specifically formulated to narrowly target the UV-C germicidal band of energy, which is the energy needed to reduce HAIs and SSIs throughout all healthcare environments, including patient rooms and surgical suites. It is not impacted by normal indoor lamp lighting, which minimizes the risk of a false positive. In addition, the UVC Dosimeter from American Ultraviolet is the only dosimeter on the market that has been verified through independent studies that took place in laboratory and hospital environments.

Mr. Meredith Stines, President and CEO of American Ultraviolet, shared - “We’re confident our partnership with Intellego Technologies enables us to bring these effective, reliable, unique and significantly less expensive dosimeters not only to all of our healthcare customers, but to all healthcare facilities throughout North America that use any manufacturer’s ultraviolet device to reduce Healthcare Associated Infections (HAIs) and Surgical Site Infections (SSIs).” He went on to say - “numerous independent studies prove UV energy is effective for disinfection. Now everyone who uses our UVC Dosimeter will know for certain that they’re delivering the dosages necessary to eradicate the intended pathogens.”

Mr. Claes Lindahl, President of Intellego Technologies, also shared a few thoughts regarding the partnership with American Ultraviolet – “We are proud to sign American Ultraviolet as our Master Distributor in the North American market. American Ultraviolet has been providing healthcare professionals with effective ultraviolet solutions for almost 60 years, and is therefore better positioned than any other manufacturer to reach professionals who want to be certain they are using ultraviolet energy effectively to rid their healthcare environments of unwanted surface and airborne microbes. We know our UVC dosimeters are safe, effective, and easy-to-use. And now we believe we can put them into the hands of a much larger number of healthcare professionals throughout North America, and thereby contribute in a more significant manner toward the goal of reducing HAIs and SSIs everywhere.

American Ultraviolet

Since 1960, American Ultraviolet has manufactured tens of thousands of high quality ultraviolet germicidal, curing and coating systems for use throughout the world. American Ultraviolet is headquartered in Lebanon, Indiana and has additional sales offices located in Torrance, California, Hackettstown, New Jersey and Frederick, MD. All equipment is manufactured in the USA.

Intellego Technologies AB

Intellego Technologies is a growing research and development company headquartered in Stockholm, Sweden. Founded in 2011, the company's main goal is to save lives with its patented dosimeter technology that can be used to indicate when a certain amount of radiation or dangerous substances are present.

For more information about the UVC Dosimeter, please contact Mr. Meredith Stines at mstines@auvco.com or 800-288-9288; or visit our website – www.americanultraviolet.com for more information about American Ultraviolet, and our complete line of UV germicidal, curing and coating equipment.
